## CLAIMS

What is claimed is:

- 1. An electronic program guide (EPG) circuit comprising: a) an EPG processor circuit, including a central processing unit (CPU), supplied with a video signal input, a horizontal sync input, and a vertical sync input, wherein the video signal input includes EPG program information in electronic form describing viewable programs which is extracted from the video signal by the EPG processor circuit;
  - b) a read only memory (ROM) connected to the EPG processor circuit for storing a program used by the EPG's CPU; and
  - c) a random access memory supplied with the EPG program information by the EPG processor circuit, for storing EPG program information for a plurality of episodes of a given program.
- 2. An EPG circuit according to claim 1, wherein the EPG processor circuit outputs an on screen display (OSD) signal for displaying the history information of a selected episode of a program.
- 3. An EPG circuit according to claim 1, further comprising a non-volatile memory for storing user specific information pertaining to the EPG circuit.
- 4. An EPG circuit according to claim 1, wherein the EPG program information is extended data service data contained in the vertical blanking interval of the video signal.

- 5. An EPG circuit according to claim 1, wherein video signal is a digital signal and the EPG program information is in the digital signal's program specific information protocol (PSIP).
- 6. An EPG circuit according to claim 1, wherein the EPG program information is received via the Internet.
- 7. An EPG circuit according to claim 1, wherein the EPG program information is received via a public switched telephone network.
- 8. An EPG circuit according to claim 1, wherein the EPG program information is received via a cable system's out of band (OOB) data stream.
